Ya-Hui (Grace) Lee

Senior Product Designer

gracelee.design • yahuilee0618@gmail.com • 415-860-1585

Senior Product Designer making complex B2B workflows clearer for users and scalable for teams. With 9+ years of experience across enterprise analytics, data, and AI products, I turn technical complexity into trusted experiences. My work spans data visualization and complex interaction design, guided AutoML workflows and design systems—all grounded in an engineering mindset and close collaboration with product and engineering.

WORK EXPERIENCE

Senior Product Designer • dotData • 2019 - 2025 • San Mateo, CA

- **End-to-end project leadership:** Spearheading the design of high-scale AutoML workflows for dotData Enterprise, leading projects from initial concept through to execution. Orchestrated cross-functional collaboration with engineering, product, and data science teams to deliver intuitive interfaces for prediction analytics.
- **Defining AI Design Patterns:** Established the core interaction models for complex data science workflows, creating intuitive patterns for data feature engineering that simplified highly technical backend processes for end-users.
- **Rapid iterative prototyping:** Optimized for speed and learning by launching iterative prototypes quickly, using direct customer feedback and "gut-instinct" design to solve immediate usability gaps in the absence of massive datasets.
- **Building a tokenized design system:** establishing a token-driven Figma library and aligning semantic tokens with front-end CSS variables. Consolidated fragmented handoff into one shared source of truth.

UX Designer • Kahuna • 2016 - 2018 • Redwood City, CA

- **Designed a scalable campaign-performance dashboard for a marketing automation platform.** Synthesized insights from 13 executive and manager interviews into a tiered visualization strategy that helped marketers move from high-level business metrics to operational detail.
- **Redesigned a complex audience-segmentation editor,** enabling non-technical marketers to create advanced AND/OR targeting logic without writing SQL. Partnered with front-end engineering to translate complex query logic into an intuitive block-based interaction model.

Software Engineer • Wislite Technology • 2007 - 2013 • Taiwan

- Built full-stack enterprise applications for banking clients, including credit-review and customer relationship systems supporting credit-risk and customer-data workflows. Established a foundation in data modeling, permissions, and complex enterprise workflows that continues to strengthen my product thinking and engineering collaboration.

EDUCATION

Web Design and New Media

MFA Academy of Art University
2013 - 2016

Information Management

BA Tamkang University
2003 - 2007

SKILLS

Product Design

Product Strategy
Interaction Design
Information Architecture
Complex Workflows
Data Visualization
Design Systems

Research

Usability Testing
User Interviews

Tools and Technical

Figma
Figma Variables / Dev Mode
Framer
Claude Code
HTML · CSS
