

Ya-Hui (Grace) Lee

Senior Product Designer

gracelee.design • yahuilee0618@gmail.com • 415-860-1585

Senior Product Designer with 9+ years of experience designing enterprise analytics, data, and AI products. I turn complex, interdependent workflows into clear, trusted experiences—from end-to-end product strategy and interaction design to scalable, token-driven design systems. With an engineering foundation, I partner closely with product and engineering to move from insight to implementation, and use AI to prototype and design thoughtful human-in-the-loop workflows.

WORK EXPERIENCE

Independent Product Designer · In a Nutshell Books · 2026 - Present

- **Designed and built a digital exhibition platform for readers to explore the cultural, visual, and editorial craft behind children’s books**—an under-served alternative to parent-focused book reviews. Launched with a collection of 65 titles.
- **Owned the end-to-end product**, including information architecture, interaction and visual design, content model, and a CMS that enables content creation, preview, editing, and publishing without hard-coded updates.
- **Designed a human-in-the-loop AI content workflow** with custom generation skills, editorial guardrails, and draft-preview publishing, reducing production time for a publish-ready book analysis from 2–3 days to ~30 minutes.

Senior Product Designer · dotData · 2019 - 2025 · San Mateo, CA

- **Led the end-to-end redesign of an enterprise AutoML workflow**, replacing a fragmented multi-screen configuration flow with a guided model-design canvas that kept data relationships, dependencies, and validation visible in one workspace. Reduced 20+ configuration actions to 5 guided steps on one canvas.
- **Designed guided configuration patterns**—including auto-schema, recommended table connections, sensible defaults, and real-time validation—to help business analysts start with a runnable setup and iterate independently without relying on data scientists.
- **Led the V1.0 and V2.0 re-architecture of the analytics suite’s design system**, establishing a token-driven Figma library and aligning semantic tokens with front-end CSS variables. Consolidated fragmented handoff into one shared source of truth, cutting engineering spec questions from about once a week to once a month after they could self-serve in Figma Dev Mode.
- **Led prioritization and workload planning across a two-person design team**, balancing core feature delivery with UX consistency improvements and high-impact bug fixes; **mentored a new designer** on product context, decision rationale, and design best practices.

UX Designer · Kahuna · 2016 - 2018 · Redwood City, CA

- **Designed a scalable campaign-performance dashboard for a marketing automation platform**. Synthesized insights from 13 executive and manager interviews into a tiered visualization strategy that helped marketers move from high-level business metrics to operational detail.
- **Redesigned a complex audience-segmentation editor**, enabling non-technical marketers to create advanced AND/OR targeting logic without writing SQL. Partnered with front-end engineering to translate complex query logic into an intuitive block-based interaction model.

Software Engineer · Wislite Technology · 2007 - 2013 · Taiwan

- Built full-stack enterprise applications for banking clients, including credit-review and customer relationship systems supporting credit-risk and customer-data workflows. Established a foundation in data modeling, permissions, and complex enterprise workflows that continues to strengthen my product thinking and engineering collaboration.

EDUCATION

Web Design and New Media

MFA Academy of Art University
2013 - 2016

Information Management

BA Tamkang University
2003 - 2007

SKILLS

Product Design

Product Strategy
Interaction Design
Information Architecture
Complex Workflows
Data Visualization
Design Systems

Research

Usability Testing
User Interviews

Tools and Technical
